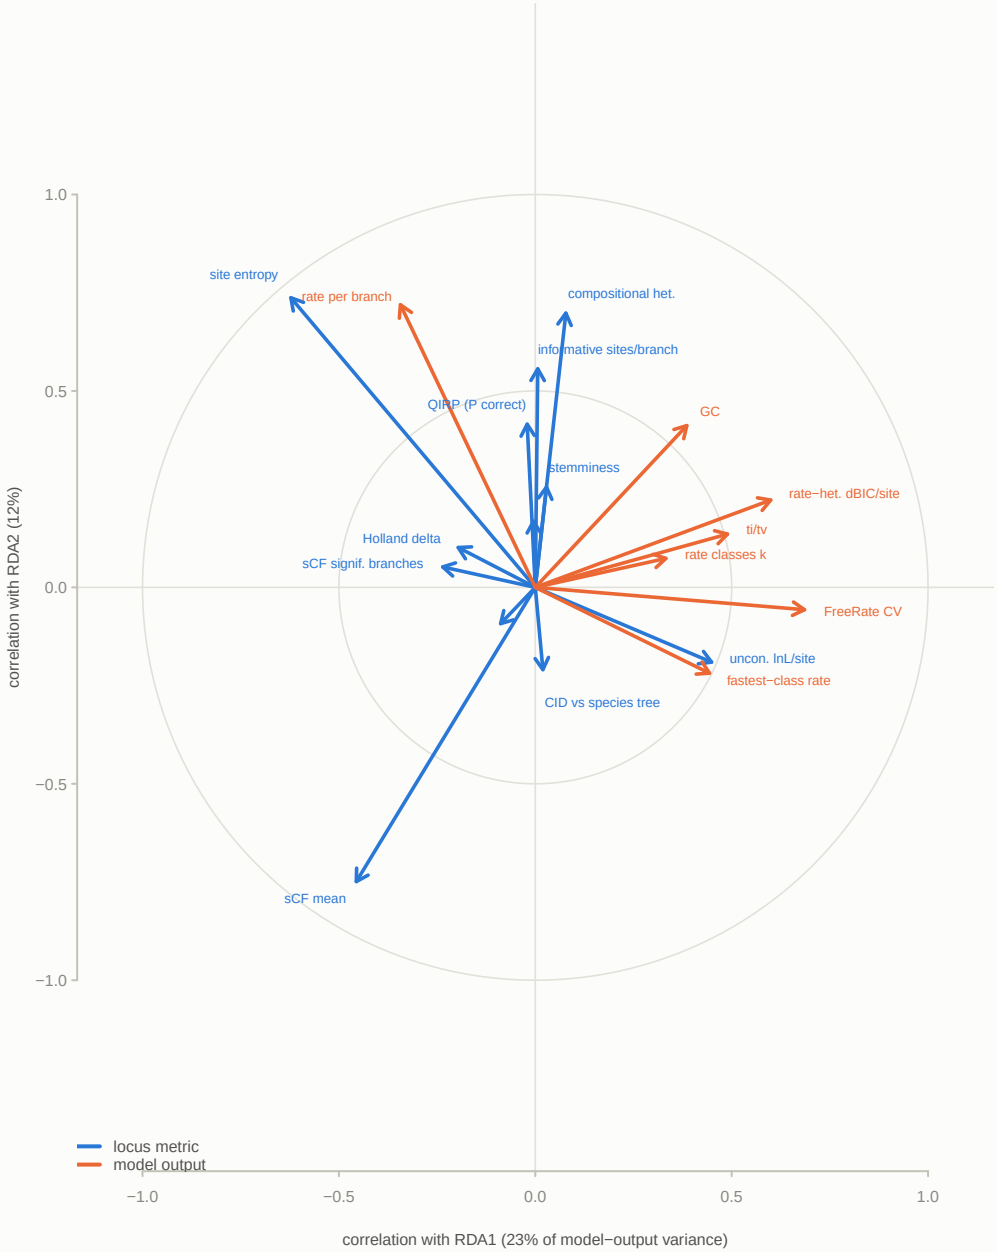
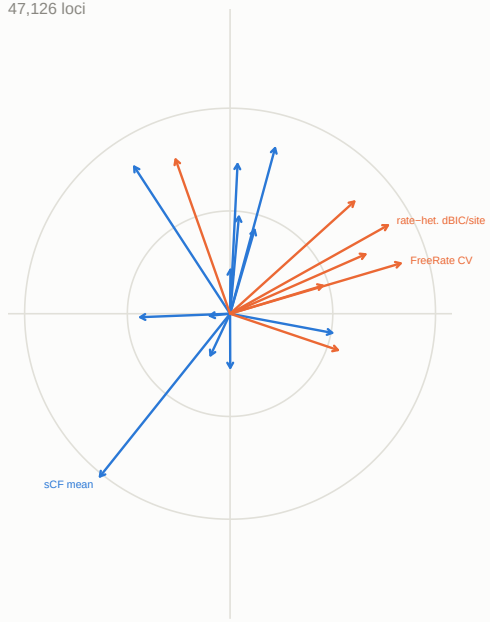
a Model outputs on locus metrics (RDA), within clade and size−free



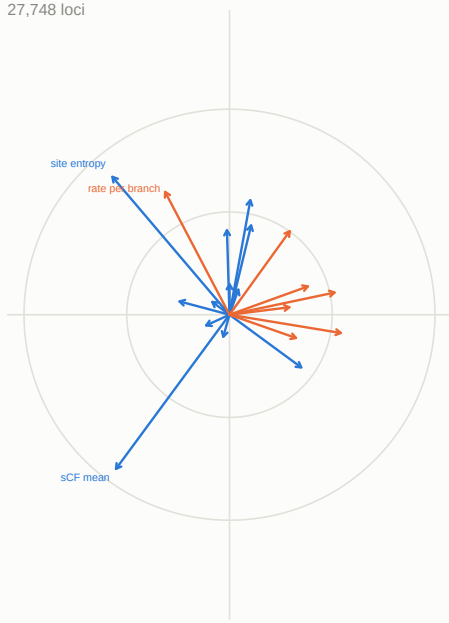
Metrics explain 37% of model−output variance; RDA1+2 hold 95% of that. Canonical r: 0.86, 0.72, 0.48.
Unlabelled (|r| < 0.2): QIHP (P incorrect), root−to−tip CoV.

b The same axes, correlations recomputed within each lineage (3 longest arrows labelled)

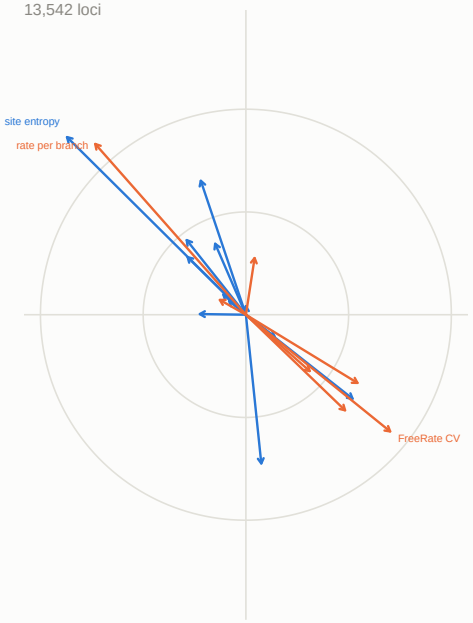
Birds
47,126 loci



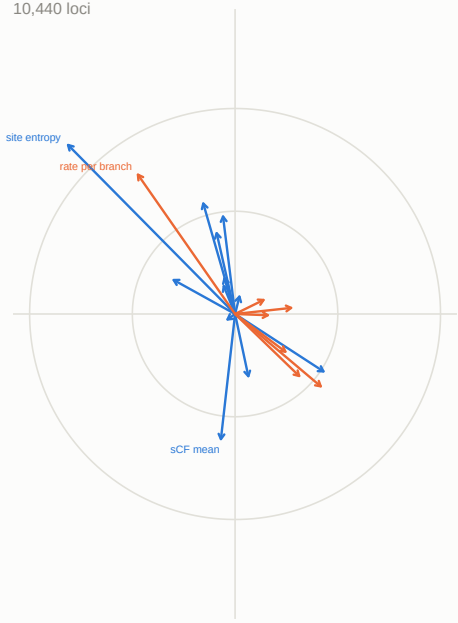
Squamates
27,748 loci



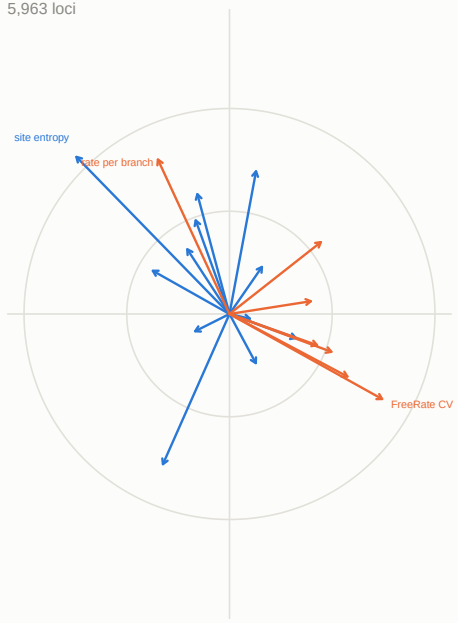
Cartilaginous fishes
13,542 loci

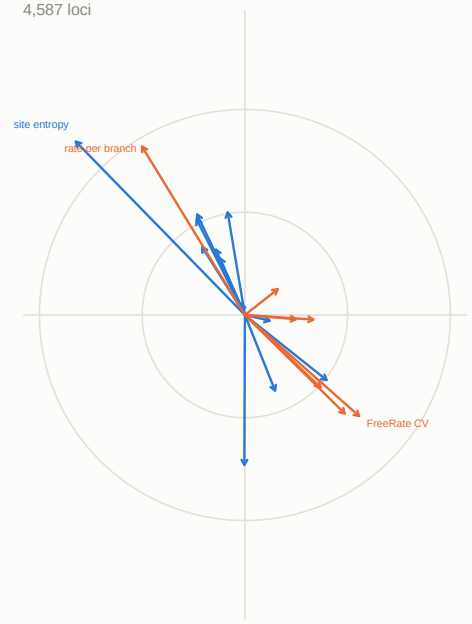


Amphibians
10,440 loci



Deep vertebrates
5,963 loci





Ray−finned fishes
4,587 loci
